

## Decontamination in Your Practice: the Naked Truth

This practical and interactive workshop will help you and your decontamination staff understand the implications for all practices of the HTM 01-05 'Decontamination in primary care dental practices' guidance.

### It will specifically help you to:

- Gain an overview of the infection risks in general practice
- Understand what is required: Essential items and Best Practice
- Undertake the practical application of effective decontamination in your practice
- Develop an action plan for implementation of current guidelines

**The workshop will use a combination of lectures, case scenarios and interactive discussion, and experienced speakers will take you through:**

- Bugs: the implications for the dental practice environment
- Compliance with essential requirements: practical hints and tips
- Best Practice: case studies and discussion for different types of practices
- Equipment and materials: what to look for
- Equipment validation and testing: setting up simple, effective processes
- Protocols and policies: what is required and how to set them up
- Action planning for your practice
